DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsuda et al. (U.S. Patent Number 4,870,833).

Matsuda et al. disclose a car air conditioning apparatus and controlling method. Referring to Fig.4, the system comprises an engine 2, a compressor 12, a condenser 14, an evaporator 17, an inverter 11b for regulating a frequency of the power generated by the generator 3 and fed to the compressor 12, and an inverter 11c for regulating a frequency of the power generated by the generator 3 and fed to the condenser blower 13 and the evaporator blower 16. An objective of '833 invention is to provide a car air conditioner capable of securing a steady air conditioning capacity regardless of any fluctuation in speed of an engine or power source. In the prior art, bus or vehicle comprises an open type compressor unit driven directly by the main engine, a condenser connected to the compressor, an expansion valve, an evaporator, a condenser blower, an evaporator blower (col.1, lines 11-19). The speed of the compressor driven by the engine sharply fluctuates likewise as in the case of the main engine (col.1, lines 30-32). Therefore, it would have been obvious to one of ordinary skill in the art to select the claimed inverter for the control the blower speed since this arrangement has provided no better or improved performance over that which is commonplace in the prior art. Also, it would have been obvious to one of

Art Unit: 3744

ordinary skill in the art to select the AC driven blowers only if the compressor performance is not a concern.
